SECURITY AUDIT

EXECUTIVE OVERVIEW

1. Audit details

Name Token	KANAK
Symbol	KANAK
Platform	ETHEREUM
Language	SOLIDITY

2. Token contract

0x956605f39Fb3F00E5ced5b922e61A6C8B062684a

3. Contract creator

0x1ad9e4e2fa4ff6c20e71ebf5fb888879d6058774

CONTRACT SECURITY

1. Contract source code verified

This token contract is open source. You can check the contract code for details. Unsourced token contracts are likely to have malicious functions to defraud their users of their assets.

2. No proxy

There is no proxy in the contract. The proxy contract means contract owner can modify the function of the token and possibly affect the price.

3. Mint function

Mint function is transparent or non-existent. Hidden mint functions may increase the amount of tokens in circulation and effect the price of the token.

4. No function found that retrieves ownership

If this function exists, it is possible for the project owner to regain ownership even after relinquishing it.

5. Owner can't change balance

The contract owner is not found to have the authority to modify the balance of tokens at other addresses.

6. No hidden owner

No hidden owner address was found for the token. For contract with a hidden owner, developer can still manipulate the contract even if the ownership has been abandoned.

7. This token can not self destruct

No self-destruct function found. If this function exists and is triggered, the contract will be destroyed, all functions will be unavailable, and all related assets will be erased.

8. No external call risk found

External calls would cause this token contract to be highly dependent on other contracts, which may be a potential risk.

9. This token is not a gas abuser

No gas abuse activity has been found.

10. This does not appear to be a honeypot

We are not aware of any malicious code.

11. Functions that can suspend trading

If a suspendible code is included, the token maybe neither be bought nor sold (honeypot risk).

12. Holders can sell all of the token

Holders can sell all of the token. Some token contracts will have a maximum sell ratio.

13. The token can be bought

Generally, these unbuyable tokens would be found in Reward Tokens. Such Tokens are issued as rewards for some on-chain applications and cannot be bought directly by users.

14. No trading cooldown function

The token contract has no trading cooldown function. If there is a trading cooldown function, the user will not be able to sell the token within a certain time or block after buying.

15. No anti_whale(Unlimited number of transactions)

There is no limit to the number of token transactions. The number of scam token transactions may be limited (honeypot risk).

16. Anti whale can not be modified

The maximum trading amount or maximum position can not be modified.

17. Tax can not be modified

The contract owner may not contain the authority to modify the transaction tax. If the transaction tax is increased to more than 49%, the tokens will not be able to be traded (honeypot risk).

18. No blacklist

The blacklist function is not included. If there is a blacklist, some addresses may not be able to trade normally (honeypot risk).

19. No whitelist

The whitelist function is not included. If there is a whitelist, some addresses may not be able to trade normally (honeypot risk).

## 20. No tax changes found for personal addresses

No tax changes were found for every assigned address. If it exists, the contract owner may set a very outrageous tax rate for assigned address to block it from trading.

21. Honeypot risk

- Buy Tax: 0.00%
- Sell Tax: 0.00%

Above 10% may be considered a high tax rate. More than 50% tax rate means may not be tradable.

TOP 10 LP HOLDERS

100%
